

Cambridge typst-slides template

Andrew Jeffery

27th June 2023

Installation

Install this repo as a git submodule for your document (or copy the folder):

```
git submodule add https://github.com/jeffa5/typst-cambridge
# ensure the template has access to typst-slides,
# skip if you want to pass your own (see optional arguments)
git submodule update --init --recursive
```

Getting started

```
#import "typst-slides/slides.typ": *  
#import "typst-cambridge/slides/cambridge.typ": *  
  
#show: slides.with(  
  // usual typst-slides pieces  
  theme: cambridge-theme(),  
)
```

Optional arguments

You can pass the following arguments to the theme on instantiation

`cambridge-theme(...)`:

- `slides`: path to typst-slides' `slides.typ`, default: `"typst-slides/slides.typ"`
- `debug`: enable debug globally, default `false`
- `numbering`: numbering format for slide numbers, default `"1 / 1"`
- `slide-count`: include the total number of slides, default `true`
- `footer`: function to produce a custom footer, default `none`

Optional arguments example

```
#let footer(section: none, slide-number: none) = [#text(fill:  
green, [#slide-number span #section])]  
#cambridge-theme(debug: true,  
    numbering: "i / I",  
    slide-count: false,  
    footer: footer)
```

Slide types

There are just two slide variants: title slide and default.

Footer

The footer is built out of the short-title, short-authors, and the (internally calculated) slide-number.

Debug slide

You can view the debug layout of the main slide elements, see the red boxes, by setting the debug parameter:

```
#slide(title: "Debug slide", debug: true)[  
    debugged!  
]
```
